

S2S WHITE

Designed for the widest range of golfers with average swing characteristics...

Features:

- S2S White is Wishon Golf's most popular shaft for golfers with average swing characteristics: ideal for golfers with smooth to average tempo and average strength
- S2S White retains its popular bend profile design for average golfers, designed with a slightly stiffer lower tip section to offer more control through impact for tighter dispersion
- S2S White hybrid shafts are for average ability golfers who need a lighter weight hybrid shaft

S2S BLACK

Wishon's Graphite Design for Better Golfers

Features:

- S2S Black Graphite Shafts are created with an improved, slightly stiffer tip bend profile design for golfers with Transition/Tempo/Release ratings from 2 to 3.
- S2S Black 65-gram Wood Shafts are for golfers with more aggressive swing characteristics who have a Strength rating of 1.5 to 2, OR who may be stronger but simply prefer the lighter total weight feel from a 65g shaft weight.
- S2S Black 85-gram wood shafts are for golfers with more aggressive swing characteristics who have a Strength rating of 2 to 2.5, OR who may be weaker but simply prefer the heavier total weight feel from an 85g shaft weight

S2S RED

A unique stiff butt/soft center/stiff tip design, for more aggressive, late-release players to play stiff for control without feeling too stiff...

Features:

- S2S Red designed with a unique, different bend profile – the majority of shafts for players with better swing fundamentals follow a similar progression of stiffness of butt firm/center firm/tip stiff over their length. The butt stiff/center soft/tip stiff design of the S2S Red breaks this tradition to offer the better player a high performance shaft for better control with solid, not too stiff feel.
- S2S Red shafts are for golfers with an above average to forceful transition and average to fast tempo with a later to very late release to deliver more clubhead stability at impact for control and accuracy but without a "boardy stiff" feel.
- S2S Red iron shafts offer the same butt stiff/center soft/tip stiff design in a heavier > 100g shaft weight for players who wish to switch from steel who are comfortable with a little heavier total weight in the irons.

WISHON GOLF

These new DCT shafts are standout performers in the Wishon Golf range, offering targeted solutions for golfers with specific swing characteristics. These shafts have been refined through years of comparative analysis of shaft bend profile technology culminating in the introduction of Wishon Golf's proprietary Dispersion Control Tip (DCT) Technology.

This innovation focuses on refining the stiffness design across the entire tip section, softening the upper tip while stiffening the lower tip to enhance the golfer's sense of a more solid and consistent impact feel. By stabilising the tip section at the moment of impact, the new DCT technology delivers a tighter, more controlled dispersion pattern, enabling golfers to experience improved accuracy and greater confidence in their shots with a more solid feel.

The S2S DCT shafts reflect Wishon's commitment to advance shaft engineering design. By aligning shaft performance with individual swing dynamics, these shafts offer golfers an optimized experience enhancing both feel and accuracy on the course.
